SUMMARY

Full stack engineer with a backend focus who builds LLM agents that run in production. At Sensetek I co-built a provider-agnostic AI agent (OpenAI and Gemini) that answers business users' questions about company data through tool calling; it is live on the web for 2 client companies, with Microsoft Teams and Google Workspace integrations rolling out. Previously spent 2 years on IBM's backend team building Node.js and NestJS APIs with TDD.

EXPERIENCE

Full Stack Developer | Sensetek | Campinas, Brazil (hybrid) Nov 2025 - Present

- Co-designed and built, as one of two engineers on the new-products team, an AI agent that lets business users query company data in plain language through tool calling; live on the web for 2 client companies.
- Designed a provider-agnostic LLM layer: the same agent runs on OpenAI or Gemini by changing configuration only.
- Built Microsoft Teams and Google Workspace integrations for the agent; client rollout in progress.
- Added guardrails that keep the agent within its business scope, block SQL injection in tool inputs, and enforce rate limiting and token-usage limits.
- Contributed to a real-time shipment tracking platform (Node.js, React) for carriers, drivers and end customers.

Software Developer | Mobiis | Campinas, Brazil Nov 2024 - Jun 2025

- Rebuilt the frontend of a legacy warehouse management system (WMS) in React and TypeScript, covering modules such as picking and packing.
- Led frontend technical decisions on parts of the refactor.
- Shipped features for Ionic/Angular mobile apps and integrated REST APIs with JWT authentication, aligning API contracts with backend teams.

Freelance Full Stack Developer (part-time, alongside Mobiis) | Falcon Tecnologia Mar 2025 - Jun 2025

- Built a point-of-sale module and CRUD screens for an ERP in React and TypeScript, integrated with REST APIs and validated with Postman.

Full Stack Developer Intern | IBM | Hortolândia, Brazil Jan 2023 - Nov 2024

- Built and maintained REST APIs for internal process automation with Node.js, NestJS, Express and TypeScript on MongoDB and PostgreSQL, plus Vue.js frontends for these internal tools.
- Implemented an approver-list feature that joins two MongoDB collections with optimized search and validation, cutting a critical process's runtime by over 30%.
- Refactored legacy backend services into NestJS, covered by Jest tests written test-first (TDD).
- Supported CI/CD pipelines and deployments on IBM Cloud in Scrum and Kanban teams.

Software Development Apprentice | IBM | Hortolândia, Brazil Dec 2021 - Dec 2022

- Programming fundamentals, Git workflows and agile practices.

PROJECTS

WhatsApp Booking Agent | Navite (co-founded side venture) 2025 - Present

- Built an AI agent that handles customer service and appointment booking over WhatsApp through Meta's WhatsApp Cloud API, deployed on AWS EC2; in pilot with a client.

SKILLS

Languages: TypeScript, JavaScript, SQL
Backend: Node.js, NestJS, Express, REST APIs, JWT authentication
AI: LLM agents, tool/function calling, OpenAI API, Gemini API, prompt engineering, guardrails
Integrations: Microsoft Teams, Google Workspace, WhatsApp Cloud API
Frontend: React, Vue.js, Angular, Ionic, Tailwind CSS
Data: PostgreSQL, MongoDB
Testing and delivery: Jest, TDD, Postman, Docker, CI/CD, Git, IBM Cloud, AWS EC2 (basic)
Ways of working: Agile (Scrum, Kanban), AI-assisted development with Claude Code (daily)

EDUCATION

Technologist Degree (Tecnólogo) in Systems Analysis and Development | Universidade Paulista (UNIP) 2025

Certification: Test-Driven Development | IBM XP Farm 2023

LANGUAGES

Portuguese (native) | English (professional working proficiency) | Spanish (basic)
